KEY INVESTOR INFORMATION

GBP I CLASS

This document provides you with key investor information about the Dominion Global Trends – Ecommerce Fund (“Ecommerce Fund”).

It is not marketing material. The information is required by law to help you to understand the nature and risks of investing in this Sub-Fund. You are advised to read it so you can make an informed decision about whether to invest.

Dominion Global Trends – Ecommerce Fund a sub-fund of Dominion Global Trends SICAV p.l.c.

Ecommerce GBP I Class – (ISIN: MT7000019709). This Sub-Fund is self-managed.

Objectives and Investment Policy

The Ecommerce Fund will seek to attain its Investment Objective by investing in the Transferable Securities of companies producing goods and services with a significant dependence or exposure to Ecommerce.

The Fund will primarily invest, in a diversified portfolio of companies which have a minimum market capital of over EUR1 billion, at the point of investment and are listed on an Approved Regulated Market and these holdings will comprise the core holdings of the portfolio. Up to 20% of the portfolio may be invested in companies which are capitalised at less than EUR1 billion including via initial public offerings and of such 20%, of the portfolio, up to one half may be invested in securities which intend to list within 12 months of purchase.

Investment in transferable securities will be made directly. Any investments in FDIs will not be synthetic and will be used for efficient portfolio management purposes only and not for investment purposes.

The Investment Committee will keep under review and, may, from time to time amend the asset allocation as it may consider necessary with a view to achieving the Sub-Fund’s Investment Objective.

For the purposes of Risk Management the Fund may also, from time to time, invest its assets in debt securities, money market instruments, money market or cash funds, and cash deposits, if, in the opinion of the Investment Committee, the prevailing market and economic conditions warrant the adoption of such a policy. Any such securities, instruments, funds or deposits will have the effect of reducing the Sub-Fund’s exposure to the securities of companies that are directly or indirectly associated with the Ecommerce Sector, as laid out above. Debt securities invested in during such periods of attempted risk reduction will primarily consist in investment grade sovereign or corporate bonds without bias towards any particular sovereign or market sector. The Fund may also invest in forward currency FDIs to hedge currency movements against certain investments held by the Fund.

The Fund does not seek to obtain its Investment Objective through borrowing.

Risk and Reward Profile

The above risk and reward indicator rates this Share Class as category 5 meaning that it offers a relatively higher risk of making a loss but also a relatively higher chance of making gains. It should be noted that even the lowest category on the indicator does not mean risk free.

Ecommerce Fund’s rating on this indicator is based on historical data and therefore may not be a reliable indication of the risk profile of Ecommerce Fund in the future. Further, the rating shown is not guaranteed and may change over time. Ecommerce Fund’s rating reflects the nature of its investments and the corresponding risks to which it is exposed. These risk factors, which include the following risks, may affect the value of Ecommerce Fund’s investments or expose it to losses:

Investment Risk

The price of the Shares and the income (if any) from them may go down as well as up reflecting the risk of investing in international markets and that investors may not receive back the amount that they originally invested.

Currency Risk

Any investments in international companies will mean that changes in currency exchange rates will have an impact on Ecommerce Fund.

Ecommerce Sector Risk

It cannot be guaranteed that investments in the Ecommerce Sector will generate continued growth in the future. It is also possible that the Fund may not be able to identify sufficient high-quality investment opportunities.

Counterparty Risk

Currency forward contracts, swaps and other forms of FDIs are not guaranteed by an exchange or its clearing house. Consequently, there are no requirements with respect to record keeping, financial responsibility or segregation of customer funds and positions. The business failure of a counterparty with which the Company has entered into “a trade” will most likely result in a default. The default of a party with which the Company has entered into “a trade” will force the Company to cover its resale or repurchase commitments, if any, at the then current market price. The Company is also exposed to the risk of failure by a counterparty to perform its obligations under an OTC FDI contract. Transactions in over-the-counter markets are not subject to the same regulatory oversight as exchange-based markets.

Efficient Portfolio Management Risk

The entry into derivative or forward transactions in a currency for the purposes of efficient portfolio management involves certain risks such as movement in interest rates, price of investments being hedged and the correlation between those types of investments and equities.

Such techniques may improve the return on invested capital but may also increase the risk of losses to the Sub Fund.

Business Risk

In certain circumstances if the Net Asset Value of the Company falls below €20 million (or €5 million in the case of a class of shares) on each dealing day within a consecutive 6 month period the shares in the Company or the class may be compulsorily redeemed.

Credit Risk

Investors should be aware that an investment might involve credit risk. Debt securities held for a Sub-Fund involve credit risk represented by the possibility of default by the issuer. This risk may be evidenced by the issuer’s credit rating. Securities which are subordinated and/or have a lower credit rating are generally considered to have a higher credit risk and a greater possibility of default than more highly rated and/or unsubordinated securities. In the event that any issuer of debt securities experiences financial or economic difficulties, this may affect the value of the relevant securities (which may be zero) and any amounts paid on such securities (which may be zero). This may in turn affect the NAV per Share.

The approach to calculating the Risk and Reward Profile as above uses historic data. This methodology cannot accurately reflect the Counterparty Risk, Efficient Portfolio Management Risk, Business Risk and Credit Risk. Full details of these Risks amongst others, can be found in the Section entitled ‘Risk Factors’ in the Sub Fund’s Prospectus. The section entitled ‘Practical Information’ below explains how you may obtain a free copy of the Prospectus and other useful information.
